PROFESSIONAL SUMMARY

8+ years of professional experience across game development, television, animation, advertising, and live stadium shows. For the past five years, I have specialized in game audio, creating immersive sound design, interactive music systems, and technical audio solutions using Wwise and Unreal Engine. Experienced across the full audio production pipeline, from concept and composition to implementation, optimization, voice integration, and final mix.

EXPERIENCE

● VCHAudio — Individual Entrepreneur

Sep 2017 — Oct 2021 · Remote, contracts, freelance

AWARDS Winner — Winner International Motorfilm Awards, 2018 · Nominated — Nominated KISFF and Toyota, 2019

- Music Composing
- Foley, Sound Design
- Composing, arranging, and producing songs
- Mixing and mastering own and contract projects, TV series, shows, games, etc.

● Argentics / Night Street Games

July 2025 — July 2026 · USA, remote

Project: Last Flag

- Designed and implemented gameplay audio for heroes, abilities, weapons, UI, finishers, and gameplay feedback using Wwise and Unreal Engine 5.
- Created sound design for 10+ hero abilities, 20+ finishers, 3 weapons, 11 MVP screens, and gameplay UI, delivering immersive player feedback across multiple gameplay systems.
- Composed 11 adaptive musical stingers for MVP screens, designed to match each hero's visual identity and integrate seamlessly with gameplay presentation.
- Implemented gameplay audio using Wwise Events, RTPCs, States, Switches, SoundBanks, HDR mixing, audio buses, and Blueprint-driven systems.
- Developed technical audio solutions for dynamic music playback, HDR mixing, gameplay events, weapons, and character abilities.
- Produced sound design and mixing for four marketing videos, including the project's official gameplay trailer.
- Served as the primary in-house Audio Designer after the department restructuring, supporting ongoing development and maintaining audio quality across gameplay systems.

● Moonray PBC

Nov 2021 — June 2025 · USA, remote

Project: Moonray: Battle Lands

- Sole Audio Designer for a 30-person development team, responsible for the project's complete audio vision, production, technical implementation, optimization, and voice direction.
- Owned the complete audio production pipeline, delivering 1,000+ sound assets for melee combat, ranged weapons, UI, movement, voice reactions, gameplay feedback, interactive music, and marketing content across PC, Android, PlayStation 5, and iOS.
- Designed and implemented 10+ gameplay audio systems and the project's audio architecture using Wwise and Unreal Engine 5, including RTPCs, States, Switches, Events, SoundBanks, HDR mixing, audio buses, profiling, memory optimization, and Blueprint-driven audio behaviors.
- Composed six adaptive music tracks and developed a Blueprint-driven interactive music system supporting multiple gameplay states and game modes. Produced sound design and music for 12 cinematic marketing videos.
- Served as Principal Audio Designer, directing remote voice-over sessions with four professional voice actors while defining audio standards, workflows, documentation, naming conventions, and implementation guidelines.

● Broadcast TV channel

Sep 2020 — Sep 2021 · Odesa, on-site part-time

- Operated live audio for weekly full-day television broadcasts, managing microphones, live mixing, and real-time audio quality throughout production.
- Mixed live performances, television programs, hosts, and guest musicians in a fast-paced broadcast environment.
- Resolved technical issues during live broadcasts, making rapid decisions to maintain uninterrupted on-air audio.
- Occasionally operated live broadcasts independently, maintaining uninterrupted audio during full-day television productions.

● NLO TV

Jan 2019 — May 2021 · Kyiv, remote part-time contract

- Owned the complete audio post-production pipeline for 10 broadcast episodes of the animated TV series Chortoviyki, delivering final masters for national television broadcast.
- Created complete sound design, Foley, dialogue editing, mixing, mastering, and broadcast delivery for 22–25 minute episodes over a two-year production cycle.
- Mixed and mastered final episodes to EBU R128 broadcast loudness standards for television delivery.
- Established efficient REAPER-based post-production workflows to maintain consistent quality throughout a two-year production schedule.
